

Question 1 Random Forest: Avg Trait Model

This notebook evaluates the custom CSC 466 random forest using `data/processed/breed_forest_avg.csv`.

This version replaces the individual AKC trait ratings with grouped average features: family life, physical, social, and personality. `Average Rank` is not used as a predictor.

Final Test Results

The model is trained on the training split using the best cross-validation parameters, then evaluated on the held-out test split. Macro F1 is useful here because the three popularity tiers are not perfectly balanced.

Model Interpretation

These tables show which features the forest split on most often and how average feature values differ across the actual popularity tiers.

	Feature	Split Count
0	Personality	99
1	Social	91
2	Physical	78
3	Family Life	60

Popularity_Tier	High Popularity	Medium Popularity	Low Popularity
Family Life	4.28	3.82	3.94
